### Resumen

PARMENTIER, I. & D. GEERINCK (2003). Catálogo de Melastomataceae de Guinea Ecuatorial. *Anales Jard. Bot. Madrid* 60(2): 331-346 (en inglés).

Se presenta el catálogo florístico de la familia Melastomataceae en Guinea Ecuatorial. Se recogen un total de 57 taxones. Tres especies fueron aceptadas teniendo en cuenta solamente la literatura. Su distribución sugiere que su presencia en Guinea Ecuatorial es muy probable. En Annobón están presentes 6 especies, 23 en Bioko y 49 en Río Muni. Los géneros mejor representados son *Memecylon* (10 especies), *Calvoa* (10) y *Tristemma* (7). Veintiséis taxones son citados por primera vez en Guinea Ecuatorial. Se propone *Heterotis obamae* Lejoly & Lisowski como sinónimo de *Heterotis arenaria* Jacq.-Fél.

Palabras clave: Guinea Ecuatorial, Melastomataceae, *Heterotis obamae*, *Heterotis arenaria*, check list, Annobón, Río Muni, Bioko.

### Abstract

PARMENTIER, I. & D. GEERINCK (2003). Check list of the Melastomataceae of Equatorial Guinea. *Anales Jard. Bot. Madrid* 60(2): 331-346.

A check list of the Melastomataceae of Equatorial Guinea is presented with 57 taxa. Three species were accepted based only on literature records, their distribution area strongly suggests their presence in Equatorial Guinea. Six species are known from Annobón, 23 from Bioko and 49 from Río Muni. Best-represented genera are *Memecylon* (10), *Calvoa* (10) and *Tristemma* (7). Twenty-six taxa are newly recorded for the country. *Heterotis obamae* Lejoly & Lisowski is set in synonymy with the previously described *Heterotis arenaria* Jacq.-Fél.

Key words: Equatorial Guinea, Melastomataceae, *Heterotis obamae*, *Heterotis arenaria*, check list, Annobón, Río Muni, Bioko.

### INTRODUCTION

Equatorial Guinea is located in Western Central Africa (fig. 1). The country includes two main islands in the Gulf of Guinea: Bioko (2017 km<sup>2</sup>), 32 km from the coast of Cameroon, and Annobón (17 km<sup>2</sup>), 400 km from Gabon. The continental mainland, Río Muni (26000 km<sup>2</sup>) is located between 1° and 2°30' N and 9°30' and 11°30' E. Elobey and

Corisco are small islands near the border of Río Muni with Gabon. Pico Basile, on Bioko Island, is the highest peak (altitude: 3011 m) and occupies half of the island, the other half being occupied by two other volcanoes: La caldera de Luba (2261 m) and Pico Biaó (2009 m) (PÉREZ DEL VAL, 1996). Malabo, north of the island, has a drier season from December to January and annual precipitation of 1932 mm per year. Pluviometry is more

important in the southern part of the island, with up to 10150 mm annual rainfall at Ureca. The temperature oscillates around 26 °C at sea level. There are strong variations in precipitation, temperature and humidity with al-

titude (PÉREZ DEL VAL, 1996). From West to East, Río Muni is divided into three mains parts. The coastal zone includes a littoral sandy plain about 30 km wide followed by small hills about 200 m high. The Niefang

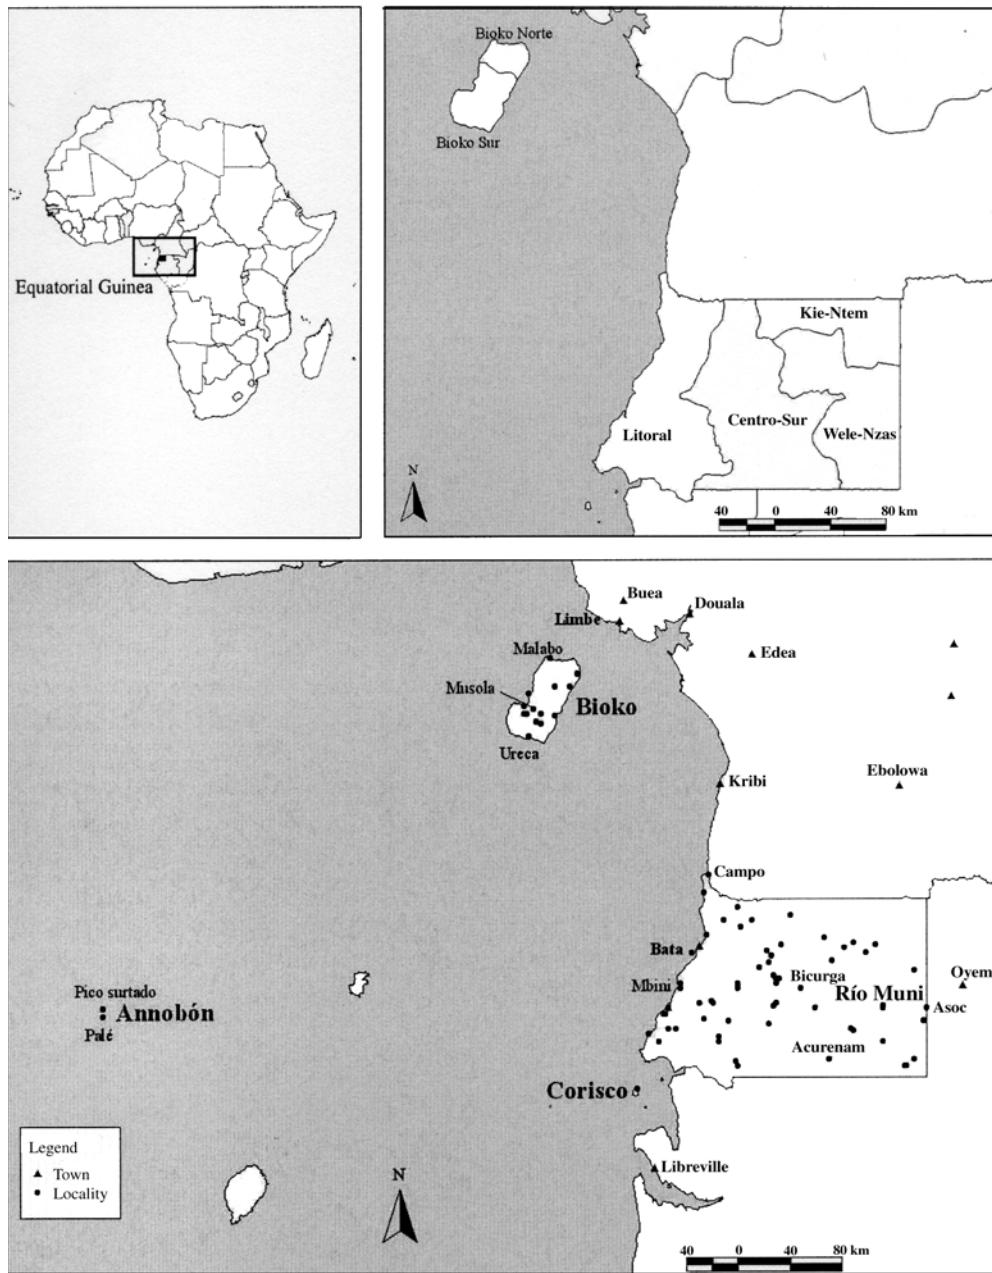

Fig. 1.—Equatorial Guinea in Africa, provinces, and localities of Melastomataceae collections.

Mountain Range reaching 1200 m crosses Río Muni. The eastern part of the country is a vast plateau of 600 to 700 m altitude scattered with inselbergs. Climate in Río Muni is equatorial with two drier seasons: from July to September and from December to February. Mean precipitation 2500 mm/year, temperature is around 26 °C all year.

Melastomataceae collections from Equatorial Guinea in the last twenty years were mainly collected by the Real Jardín Botánico of Madrid and the Laboratoire de Botanique systématique et de Phytosociologie of the Université Libre de Bruxelles. A good review of the botanical work in Equatorial Guinea is given in VELAYOS & AEDO (2001). Most recent collections from Río Muni in BRLU were collected by Senterre for his study of the forest of the Parque Nacional de Monte Alén and the Parque Nacional de Nsork (SENTERRE & NGUEMA, 2001; SENTERRE, 2001) and by Parmentier, with her studies on the inselberg vegetation (PARMENTIER & al., 2001; PARMENTIER & NGUEMA, 2001; PARMENTIER, 2002).

Early general studies giving information on Melastomataceae of West tropical Africa come from HUTCHINSON (1928), GUINEA (1946, 1951) and HUTCHINSON & DALZIEL (1954). The major work of Jacques-Félix, is our main reference for this paper, especially his flora of Melastomataceae from Cameroon (JACQUES-FÉLIX, 1983a) and Gabon (JACQUES-FÉLIX, 1983b). It was usefully completed by a recent revision of *Calvoa* (FIGUEIREDO, 2001). Recent works notifying the occurrence of Melastomataceae species on Bioko are those of MORALES (1994, 1995) and FERNÁNDEZ CASAS & MORALES VALVERDE (1995).

#### MATERIALS AND METHODS

The check list is mainly based on the examination of about 600 Melastomataceae herbarium specimens from BATA (Herbario Nacional de Guinea Ecuatorial), BRLU (Herbarium de l'Université Libre de Bruxelles) and MA (Herbario del Real Jardín Botánico de Madrid). Determinations were based

on the works of Jacques-Félix, especially in the flora of Melastomataceae of Gabon (JACQUES-FÉLIX, 1983a) and Cameroon (JACQUES-FÉLIX, 1983b) completed by more recent works (BORHIDI, 1993; JACQUES-FÉLIX, 1987; J. LEJOLY & S. LISOWSKI, 1999c; FIGUEIREDO, 2001). Bibliographic records from Melastomataceae in Equatorial Guinea were obtained mainly from AEDO & al. (1999), completed by recent publications like those of LEJOLY & LISOWSKI (1999a,b,c), PARMENTIER & NGUEMA (2001), PARMENTIER & al. (2001), PARMENTIER (2002). Doubtful records and insufficiently known species are given at the end of the check list. The locality names used in this check list have been brought up-to-date and made uniform (table 1), localities are mapped in figure 1. Those localities are in agreement with those cited in the check list of the Pteridophytes of Equatorial Guinea (VELAYOS & al., 2001). The check list is alphabetically ordered by species within genera. Under each accepted taxon, the accepted synonyms used in the literature of Equatorial Guinea are included (JACQUES-FÉLIX, 1974b; LEBRUN & STORK, 1991, 1995, 1997; FIGUEIREDO, 2001). Specimens are alphabetically arranged within province, locality and collector. The herbaria where they are deposited are mentioned. Herbarium codes for MA specimens are given. The indice "st" means that a specimen is sterile. Previous bibliographical records for each taxon are listed. When the taxon was recorded under an accepted synonym it is indicated (i.e. LEJOLY, 1999b: 118, sub *Dissotis irvingiana*).

New signalisations for the country are indicated by a "\*" before the taxon name.

#### THE CHECK LIST

##### 1. **Amphiblemma mildbraedii** Gilg ex Engl.

BIOKO SUR: Moca, Fernández Casas 11486 (MA 555825), Guinea 1968 (MA 268681). Moca-Riaba, por el camino viejo, Fernández Casas 11846 (MA 555826). Dumu, inselberg Parmentier & Esono 3622 (BRLU), *Poremski*, *Biedienger* & *Nguema* 3599 (BRLU, BATA). Piedra Nzas, inselberg, *Lejoly* 99/202, 99/268 (BRLU).

Previously recorded from Río Muni (LEJOLY, 1999b: 118, sub *Dissotis irvingiana*; PARMENTIER & NGUEMA, 2001: 216 sub *D. irvingiana*; PARMENTIER & al., 2001: 359; PARMENTIER, 2002: 915).

## 4. Calvoa crassinoda Hook. f.

*Calvoa molleri* Gilg, *C. uropetala* Mildbr.

This species has been recorded from Annobón [Quioveo, *Mildbraed* 6528 (BATA), MILDBRAED, 1922: 163 sub *Calvoa uropetala*; GUINEA, 1946: 341 sub *C. uropetala*; GUINEA, 1951a: 182, sub *C. uropetala*; HEDBERG & HEDBERG, 1968: 134, BRENAN, 1979: 464 sub *C. uropetala*; MORALES, 1994: 15, sub *C. uropetala*; AEDO & al. (1999) sub *C. uropetala*; Pic Santiago, à l'Ouest du lac de cratère, *Descoings* 12847 (P), 12848 (P), FIGUEIREDO, 2001: 191)]. We could not examine any herbarium material of this species, but its distribution area suggest as probable its presence in Equatorial Guinea.

## 5. Calvoa grandifolia Cogn.

This species has been recorded from Annobón [Above Crater Lake on W side. Cliff sides in (not dense) wood. *Wrigley & Melville* 164 (BM,K,MA,P), Figueireido 2001: 190]. We could not examine any herbarium material of this species, but its distribution area suggest as probable its presence in Equatorial Guinea.

## 6. Calvoa hirsuta Hook. f.

Previously recorded from Río Muni (LEJOLY & LISOWSKI, 1999c: 188; PARMENTIER, 2002: 915).

The specimens of *H. rotundifolia* (Sm.) Jacq.-Fél. and *Dissotis fruticosa* (Brenan) Keay we examined do not show sufficient differences with *H. prostrata*. We decided to include them under *H. prostrata*. As we have not compared the type material of the three species, we do not put them in synonymy. Nevertheless we consider the species *D. fruticosa* as uncertain as well as the presence of *H. rotundifolia* in Equatorial Guinea.

### 28. *Heterotis rupicola* (Gilg ex Engl.) Jacq.-Fél.

CENTRO-SUR: P. N. de Monte Alén, dalle rocheuse d'Engong, *Lejoly* 99/081 (BATA, BRLU, MA-621788), *Parmentier & Esono* 2983 (BRLU); ibidem, dalle rocheuse de Monte Alén, *Lejoly* 99/032 (BATA, BRLU), *Parmentier* 1510 (BRLU).

Previously recorded from Río Muni (LEJOLY & LISOWSKI, 1999c: 188; PARMENTIER & NGUEMA, 2001: 216; PARMENTIER & al., 2001: 350; PARMENTIER, 2002: 914).

### 29. \**Lijndenia jasminoides* (Gilg) Borhidi

ANNOBON: Aual-Palé, 2,5 km de Aual, *Carvalho* 3110 (MA 558407).

#### 54. \**Warneckea fosteri* (Hutch. & Dalz.) Jacq.-Fél.

ANNOBON: Ridge W of Crater Lake, *Wrigley* 201 (MA 268763). Palé, *Carvalho* 3144 (MA 558408). LITORAL: Bata-Mbini, km 27, *Carvalho* 6086 (MA 618989).

#### 55. *Warneckea membranifolia* (Hook. f.) Jacq.-Fél.

*Memecylon membranifolium* Hook. f.

CENTRO SUR: P. N. de Monte Alén, transect de Nkumékié à 2650 m du début du layon, *Senterre & Ngomo* 15 (BRLU); ibidem, transect de Nkumékié à 3200 m du début du layon, *Senterre & Ngomo* 25 (BRLU). WELE-NZAS: Akoak Ebanga, inselberg, *Parmentier & Esono* 3560 (BRLU). Kukumankok, entre l'inselberg Mungum et le village, *Lejoly & Esono* 57.

Previously recorded from Bioko (HUTCHINSON, 1928: 215 sub *Memecylon membranifolium*; GUINEA, 1946: 341 sub *M. membranifolium*; HUTCHINSON & DALZIEL, 1954:

263 sub *M. membranifolium*) and Río Muni (PARMENTIER & al., 2001: 362).

**56. Warneckea memecyloides** (Benth.) Jacq.-Fél.

*Memecylon memecyloides* (Benth.) Exell

BIOKO NORTE: Ela Nguema, barrio de Santa Cruz, *Carvalho* 3398 (MA 688891), 3423 (MA 558406).

Previously recorded from Annobón (FERNÁNDEZ CASAS & MORALES, 1995: 237 sub *Memecylon memecyloides*) and Bioko (HUTCHINSON & DALZIEL, 1954: 263; MORALES, 1994: 17; 1995: 17).

**57. \*Warneckea pulcherrima** (Gilg) Jacq.-Fél.

CENTRO SUR: Bicurga, inselberg, *Parmentier & Esono* 3214<sub>st</sub> (BRLU). P. N. de Monte Alén, 2 km au NE du site de traversée du Río pour aller aux cataractas, *Senterra, Obiang & Ngomo* 2364<sub>st</sub> (BRLU); ibidem, transect de Monte Chocolate, *Lejoly* 95T/L3.1023<sub>st</sub> (BRLU).

*Doubtful records*

No specimen supporting the following records has been found:

**Memecylon englerianum** Cogn. recorded in Río Muni (GUINEA, 1946: 341). This species is distributed over Nigeria and Western Cameroon.

**Memecylon erythranthum** Gilg recorded in Río Muni (GUINEA, 1946: 146). This species is distributed in Tanzania and Zimbabwe; its presence in Equatorial Guinea is not very probable.

**Osbeckia tubulosa** Sm. recorded in Río Muni (GUINEA, 1946: 184). This species is distributed from Guinea to Nigeria; its presence in Equatorial Guinea is not very probable.

**Tristemma albiflorum** Benth. recorded in Río Muni (GUINEA, 1946: 184). This species is distributed from Senegal to Ghana, its presence in Equatorial Guinea is not very probable.

We prefer not to consider those species in the check list as long as no material is collected in Equatorial Guinea.

*Insufficiently known species*

**Memecylon fernandianum** Gilg ex Engl. has been recorded from Bioko (GUINEA, 1946: 341; HUTCHINSON & DALZIEL, 1954: 263).

**Memecylon tessmannii** Gilg ex Engl. recorded in Río Muni (GUINEA, 1946: 341).

**Memecylon vogelii** Naudin recorded in Bioko (HUTCHINSON, 1928: 215; GUINEA, 1946: 341).

**Tristemma oreosthamnos** Mildbr. has been recorded from Annobón (EXCELL, 1963: 100; GUINEA, 1946: 340; 1951: 178; HEDBERG & HEDBERG, 1968: 134; MORALES, 1994: 18).

We could not examine any specimens of those species. As they are insufficiently known (LEBRUN & STORK, 1991) we prefer not to consider them in the check list.

*Repartition of species between Bioko, Annobón and Río Muni*

The species repartition is given in table 2, as well as the indications for the 26 new species for the country, for Río Muni (29), Bioko (6) and Annobón (3). Fifty-seven species were found in Equatorial Guinea, 49 in Río Muni, 23 in Bioko and 6 in Annobón. The high number of species newly recollected in the country and the fact that several species are represented by one or few herbarium specimen, indicates that the prospection should be continued.

*Collection index*

The species is indicated by a number in parenthesis corresponding to the number in the check list.

*Carvalho*: 2008 (27); 2050 (48); 2091 (27); 2210 (47); 2484 (1); 2523 (16); 2615 (50); 2617 (1); 2976 (21); 3110 (29); 3144 (54); 3266 (6); 3398 (56); 3405 (14); 3411 (14); 3423 (56); 3527 (43); 3621 (47); 3767 (1); 3834 (30); 3868 (16); 4093 (46); 4114 (48); 4203 (43); 4465 (14); 4506 (43); 4668 (26); 4670 (19); 4675 (17); 4969 (16); 5255 (17); 5287 (8); 5299 (36); 5407 (42); 5574 (17); 5684 (39); 5960 (14); 6086 (54); 6167 (50); 6279 (25); 6325 (42); 6367 (42); 6441 (38).

#### ACKNOWLEDGMENTS

We are grateful to the Biod-iberia project that allowed us to work on the MA material, and to all the staff of MA, especially to Mauricio Velayos, Francisco Cabezas, Ramón Morales and Carlos Aedo. We thank the WAG herbarium for the loan of material. We thank BR for use of the African Herbarium. Estrella Figueiredo determined part of the *Calvoa* specimens. We are grateful to Jean-Claude Moniquet and Nicolas Barbier (Université Libre de Bruxelles, BRLU) for their valuable help. This work was partially financed by the Spanish Dirección General de Investigación Científica y Técnica (DGICYT) through the research project REN 2002-011299.
